

View, Manage, and Respond to Your Supply Chain from a Mobile Device

APL Logistics understands the challenges of managing and controlling a complex global supply chain.

As a step towards enhancing our suite of value-added services and to address the increased mobile needs of our customers who require instant and reliable access, APL Logistics has developed SeeChange Lite, a streamlined mobile version of our web-based shipment tracking and collaboration tool, SeeChange.

Introducing SeeChange Lite

SeeChange Lite – a free, downloadable application compatible with Apple, Android and Blackberry devices, provides customers with secure and convenient shipment tracking capabilities. This mobile application is specially designed to help you keep up with time-critical information so you can quickly respond to shifting customer demands and make the right supply chain decisions, wherever, whenever.

In addition to providing real-time shipment tracking, SeeChange Lite also allows you to retrieve shipment, equipment and booking summaries, providing you with full control of your supply chain, at every step of the way.

To further facilitate collaboration between supply chain partners, users with advanced access can also add useful information to a particular Shipment or Purchase Order: Communicate with your partners by using the time and user-stamped Comments function or call a Purchase Order to attention using the Hot PO Flag indicator in the application. SeeChange Lite is interactive, allowing users to associate an event against a shipment, improving efficiency across the entire supply chain.

With SeeChange Lite, you can:

- Track your shipments by shipment number, equipment number or booking number with advanced access
- View booking information
- View shipment status alerts
- View equipment information
- Conduct advanced shipment search with additional search filters after log in
- Create and update event reference information
- Flag urgency of a purchase order or equipment

Downloading SeeChange Lite is fast and easy. Just visit:

Contact your APL Logistics Representative to discover how our supply chain management technology tools can help you better manage your business.
